

THE ALASKAN GOLD MINE

PART I

You have taken a three-month option on a gold mine outside Juneau, Alaska. It took you two months of dangerous journey to get to the mine. In two weeks of exploration (and recuperation) you have regained your health, except for your injured left hand, which sometimes can become suddenly quite weak. In the last 24 hours, you have finally discovered gold in what appears to be good quantity. You have exactly two weeks to get to the claims office in Juneau. If you arrive late, and attempt to exercise your option on the property (with the owners knowing you have visited it), there will probably be an auction at which you could be easily out-bid, given your limited financial resources. Here are your alternatives:

- A. Wait 3-4 weeks until the weather warms up and enjoy a safe trip home.
- B. Go over the mountains. This is dangerous. It is sometimes impassable. It is quick, if you can make it without harm: 7-10 days. If you encounter storms or injury, you will probably have to turn back or perish, as the longest part of the journey is on the way over the top of the mountains.
- C. Go through the valley passes. This is less dangerous and is usually passable. It is slow and tiring. You can probably make it in 2 to 3 weeks.
- D. Wait 2-3 days, take Option B weather permitting; if not, take Option C. (There is no advantage to waiting if you prefer option C anyway, and waiting to take Option A = Option A).

THE ALASKAN GOLD MINE**PART II**

Assume you chose the valley passes (Option C). Five days later you are halfway there. You have pushed too hard and sprained your ankle. Pat, an old friend on a trapping expedition comes along and takes you to a cabin. Pat could get to the claims office in Juneau, and offers to take you. Travelling together, it might take 10 to 14 more days to get there. You have 9 days to make it to the claims office.

If you tell Pat and make a deal, Pat alone could get there in about 8 to 9 days. If you were well, you could do it easily in 7 days, but you presently cannot make it without a few days rest and then 10 days to 2 weeks of travel.

You are not sure whether Pat can exercise the option and file the claim correctly, because Pat is not too bright, tends to drink to excess, and is not the single-minded hustler that you are. Pat is a simple old friend who likes trapping, but would, you suspect, desire financial independence. You think you can trust Pat if you offer to split the find 50:50, since your expertise and help would be needed to capitalize on the discovery.

What is your decision?

Go with Pat

Go it alone

Send Pat

Explain and detail your best strategy for success and how you plan to do it?

You can go with him and try to make
it halfway through if you aren't going
to make it, you can send pat alone.

If you arrive late, and attempt to exercise your option on the property (with the owners knowing you have visited it), there will probably be an auction at which you could be easily out-bid, given your limited financial resources. Here are your alternatives:

- A. Wait 3-4 weeks until the weather warms up and enjoy a safe trip home.
- B. Go over the mountains. This is dangerous. It is sometimes impassable. It is quick, if you can make it without harm: 7-10 days. If you encounter storms or injury, you will probably have to turn back or perish, as the longest part of the journey is on the way over the top of the mountains.
- C. Go through the valley passes. This is less dangerous and is usually passable. It is slow and tiring. You can probably make it in 2 to 3 weeks.

The weather is only moderately favorable, with what may be a mountain storm brewing. You will know if it is a storm within 48 hours, and whether the mountain is passable (if the storm comes) about one day later.

- D. Wait 2-3 days, take Option B weather permitting; if not, take Option C. (There is no advantage to waiting if you prefer option C anyway, and waiting to take Option A = Option A).

What do you do? (Circle your answer)

A B C D

Name (print): Dharma Dalby Signature: Dharma Dalby

THE ALASKAN GOLD MINE**PART II**

Assume you chose the valley passes (Option C). Five days later you are halfway there. You have pushed too hard and sprained your ankle. Pat, an old friend on a trapping expedition comes along and takes you to a cabin. Pat could get to the claims office in Juneau, and offers to take you. Travelling together, it might take 10 to 14 more days to get there. You have 9 days to make it to the claims office.

If you tell Pat and make a deal, Pat alone could get there in about 8 to 9 days. If you were well, you could do it easily in 7 days, but you presently cannot make it without a few days rest and then 10 days to 2 weeks of travel.

You are not sure whether Pat can exercise the option and file the claim correctly, because Pat is not too bright, tends to drink to excess, and is not the single-minded hustler that you are. Pat is a simple old friend who likes trapping, but would, you suspect, desire financial independence. You think you can trust Pat if you offer to split the find 50:50, since your expertise and help would be needed to capitalize on the discovery.

What is your decision?

Go with Pat

THE ALASKAN GOLD MINE**PART II**

Assume you chose the valley passes (Option C). Five days later you are halfway there. You have pushed too hard and sprained your ankle. Pat, an old friend on a trapping expedition comes along and takes you to a cabin. Pat could get to the claims office in Juneau, and offers to take you. Travelling together, it might take 10 to 14 more days to get there. You have 9 days to make it to the claims office.

If you tell Pat and make a deal, Pat alone could get there in about 8 to 9 days. If you were well, you could do it easily in 7 days, but you presently cannot make it without a few days rest and then 10 days to 2 weeks of travel.

You are not sure whether Pat can exercise the option and file the claim correctly, because Pat is not too bright, tends to drink to excess, and is not the single-minded hustler that you are. Pat is a simple old friend who likes trapping, but would, you suspect, desire financial independence. You think you can trust Pat if you offer to split the find 50:50, since your expertise and help would be needed to capitalize on the discovery.

What is your decision?

Go with Pat _____

Go it alone _____

Send Pat ✓

Explain and detail your best strategy for success and how you plan to do it?

If you travel with Pat, there might be a chance you may not make it on time, because you only have 9 days to make it on time, so it will be best to make a deal with Pat and send him, since he's a friend and at some point there is a trust in there, he can offer him half the money he gets.

THE ALASKAN GOLD MINE

PART I

You have taken a three-month option on a gold mine outside Juneau, Alaska. It took you two months of dangerous journey to get to the mine. In two weeks of exploration (and recuperation) you have regained your health, except for your injured left hand, which sometimes can become suddenly quite weak. In the last 24 hours, you have finally discovered gold in what appears to be good quantity. You have exactly two weeks to get to the claims office in Juneau. If you arrive late, and attempt to exercise your option on the property (with the owners knowing you have visited it), there will probably be an auction at which you could be easily out-bid, given your limited financial resources. Here are your alternatives:

- A. Wait 3-4 weeks until the weather warms up and enjoy a safe trip home.
- B. Go over the mountains. This is dangerous. It is sometimes impassable. It is quick, if you can make it without harm: 7-10 days. If you encounter storms or injury, you will probably have to turn back or perish, as the longest part of the journey is on the way over the top of the mountains.
- C. Go through the valley passes. This is less dangerous and is usually passable. It is slow and tiring. You can probably make it in 2 to 3 weeks.
- D. Wait 2-3 days, take Option B weather permitting; if not, take Option C. (There is no advantage to waiting if you prefer option C anyway, and waiting to take Option A = Option A).

What do you do? (Circle your answer)

A B C D

Explain and detail your best strategy for success and how you plan to do it?

I will write a step by step instruction for pat. If possible I will have him put me on call so I could speak to them alone. or I would write a letter that pat could take with him that has my intentions written. i would also have pat sign a hand written contract insuring that the split will happen.

Send Pat X

Explain and detail your best strategy for success and how you plan to do it?

- With Pat is not an option because 10-14 > 9.
- Go it alone is not an option because 10 - 2 weeks > 9.
- Send pat is only option.
- Write instructions / contract to ensure 50:50 ratio
